Clean Water and Sanitation

SDG GOAL 6

Ensuring access to safe water, sanitation, and hygiene for every person on the planet — a foundation for health, dignity, and sustainable development.

What Is SDG 6?

6 CLEAN WATER AND SANITATION

A Universal Human Right

Clean water means safe, accessible drinking water free from contamination. Sanitation means proper management of waste and promotion of hygiene practices. Together, they form a basic human right recognized by the United Nations.

-  SDG 6 calls on all nations to achieve universal and equitable access to safe drinking water and adequate sanitation by 2030.

Why Clean Water and Sanitation Matter

Public Health

Prevents deadly diseases like cholera, typhoid, and diarrhea — the leading causes of child mortality worldwide.

Economy & Agriculture

Clean water sustains agriculture, supports industry, and reduces the economic burden of waterborne illness.

Environment

Proper sanitation protects ecosystems, reduces water pollution, and supports sustainable land and resource use.

Poverty Reduction

Access to water and sanitation unlocks time, health, and economic opportunity — especially for women and girls.

The Challenges We Face Today

A Complex, Interconnected Crisis

No single challenge stands alone. Pollution worsens scarcity; urbanization overwhelms infrastructure; climate change deepens inequality. Addressing SDG 6 requires understanding — and acting on — all of these pressures simultaneously.

- ⚠ Over 2 billion people still lack access to safely managed drinking water. More than 3.6 billion lack safe sanitation services.

Toilet Presence vs. Usability

Data from India's SBM achievement list reveals a persistent gap: households may have a toilet on record, but many are incomplete or unusable. **Building toilets is only the first step — ensuring they are functional and maintained is critical to lasting impact.**

usability in households in the SBM achievement

Leading Organizations

NGOs Driving Change on the Ground

WaterAid

Works in 28 countries to deliver clean water, decent toilets, and good hygiene — reaching the most marginalized communities.

Charity: Water

Has funded over 100,000 water projects globally, bringing clean drinking water to more than 17 million people in developing nations.

Sulabh International

Pioneered low-cost sanitation in India, constructing over 1.5 million household toilets and promoting dignity for sanitation workers.

NGO Activities in Action

From Infrastructure to Awareness

- **Water filtration systems** installed in homes, schools, and community centers
- **Toilet construction** in underserved villages, prioritizing schools and women's access
- **Hygiene campaigns** on handwashing, menstrual health, and safe food handling
- **Community training** on wastewater management and rainwater harvesting

Champions of Change

Leaders Who Made a Difference

Bindeshwar Pathak

Founded Sulabh International and developed affordable two-pit pour-flush toilets, transforming sanitation access for millions across India.

Scott Harrison

Founded Charity: Water, pioneering transparent fundraising models that have funded clean water projects in 29 countries.

Bill Gates

Through the Gates Foundation, invested hundreds of millions in reinventing the toilet and financing sanitation innovations for the developing world.

Akshay Kumar

Used his platform and the film *Umrao Kaooti* to spark a national conversation in India about sanitation dignity and open defecation.

How We Achieve SDG 6 by 2030

Progress requires all four pathways working in parallel — no single sector can close the gap alone. Governments set the framework; technology scales solutions; NGOs build local trust; and conservation ensures long-term resilience.

The Path Forward

CALL TO ACTION

Water is not a privilege.

Safe water and sanitation are the bedrock of every other development goal. When we secure SDG 6, we unlock health, education, equality, and resilience for all.

Every Actor Has a Role

Policymakers

Fund, regulate, and prioritize WASH in national development plans.

NGOs & Partners

Bridge gaps, mobilize communities, and deliver where governments cannot reach.

Citizens

Conserve water, demand accountability, and support awareness campaigns.

Expanding Our Reach: Activities & Impact

From local initiatives to national programs, a diverse range of activities are underway to achieve SDG 6. These efforts combine infrastructure development with crucial community engagement and education.

Community Water Management

Empowering local populations to manage and maintain their water sources, ensuring long-term sustainability and ownership. These projects often lead to significant reductions in waterborne diseases in participating communities.

Government Sanitation Schemes

National programs like India's Swachh Bharat Abhiyan have supported the construction of over **100 million** household toilets, drastically reducing open defecation and improving public health for hundreds of millions.

Hygiene Education Initiatives

School-based and community-wide campaigns promote critical hygiene behaviors, such as handwashing and safe water storage, reaching an estimated **50 million** individuals annually with vital health information.

Advanced Water Purification

Deployment of modern water filtration and purification technologies in high-risk areas, providing access to safe drinking water for over **5 million** people previously exposed to contaminated sources.

Our Shared Responsibility: Achieving SDG 6

Water. Sanitation. For All.

The journey to secure clean water and sanitation for everyone by 2030 is ongoing. It demands sustained collaboration, innovative solutions, and unwavering commitment from governments, organizations, and individuals worldwide. Together, we can turn this ambitious **goal** into a universal reality, transforming lives and safeguarding our planet for generations to come.
